

Enabling Microsoft Copilot in Dynamics 365 Finance and Operations

STEP-BY-STEP PROCESS RECORD · COMMERCIAL CLOUD

Overview

This document records the exact steps taken to enable Microsoft Copilot capabilities in a Dynamics 365 Finance and Operations commercial cloud environment. The process covers Power Platform prerequisites, tenant-level settings, app installations, and in-app feature management.

Environment details and starting conditions

PARAMETER	VALUE
Environment	Your Dynamics 365 F&O environment
Cloud type	Commercial (standard)
Copilot features targeted	Sidecar (chat pane) and AI summaries
Power Platform integration	Must already be enabled in Lifecycle Services

Phase 1: Power Platform admin center

All steps in this phase were performed in the Power Platform admin center (admin.powerplatform.microsoft.com).

Step 1.1 · Verify and update the Dynamics 365 Copilot apps

Navigate to: Power Platform admin center > Environments > [Your Environment] > Resources > Dynamics 365 apps. Search for "Copilot".

ITEM	STATUS	NOTES
Business Copilot AI	Installed	No action needed
Copilot in Microsoft Dynamics 365 Finance	Installed	No action needed
Copilot in Microsoft Dynamics 365 Supply Chain Management	Updated	Had "Update available"; updated via the ... menu
FnOCopilot	Installed	No action needed
Power Apps App Copilot App	Installed	No action needed

The SCM Copilot app update was triggered and completed within approximately 20 minutes.

Step 1.2 · Enable "Publish Copilots with AI features" (tenant setting)

Navigate to: Power Platform admin center > Settings (left navigation, not the environment's settings).

1. Locate the row named "Publish Copilots with AI features".
2. Click it to open the side panel.

3. Toggle to Enabled.
4. Click Save.

Result: the Value column shows "Enabled" in the tenant settings list.

Step 1.3 · Enable Bing Search (required for the sidecar)

On the same tenant settings page:

1. Locate the row named "Support Bing search solutions".
2. Click it and enable it.
3. Click Save.

Result: the Value column shows "Enabled". This is required for the Copilot sidecar to provide generative answers.

Phase 2: Feature management in Finance and Operations

Navigate to: Finance and Operations > System administration > Feature management. Switch to the "All" tab to search across all features.

Step 2.1 · Collections coordinator summary

Search term used: "Collections".

FEATURE	STATUS	NOTES
Collections coordinator summary	Already enabled	On by default in this version
Collections coordinator workspace	Already enabled	On by default in this version

No action was needed. This feature was already active. It displays an AI-generated summary and draft email in the Collections coordinator workspace, including payment history, outstanding debt, and revenue data.

Step 2.2 · Customer page summary

Search term used: "Customer".

FEATURE	STATUS	NOTES
Customer page summary	Already enabled	On by default in this version

No action was needed. This feature was already active. It shows an AI-generated summary on customer records using invoices, payments, sales orders, overdue lines, and more.

Step 2.3 · Generative help and guidance (sidecar)

Search terms tried: "Generative help", "AI summaries", "Copilot".

Result: no results in Feature management for any of these terms. This confirmed that the sidecar feature is controlled entirely by the FnOCopilot app installed in Power Platform (step 1.1), not by a Feature management toggle. No action was required here.

Step 2.4 · Immersive Home (optional)

Search term used: "Immersive".

FEATURE	STATUS	NOTES
Immersive Home	Available, not yet enabled	Optional AI-first landing page

This feature was found but not enabled during this session. It is optional and can be enabled at any time by clicking "Enable now" on the Immersive Home row in Feature management. It transforms the F&O home page into a modern AI-first layout.

Phase 3: Verification

After completing all Power Platform steps, the F&O environment was opened to verify Copilot was live.

Copilot sidecar: verified working

- Opened the F&O home page.
- The Copilot chat pane opened automatically on the right side of the screen.
- The pane displayed: "Have a question about this app? Ask Copilot."
- A chat input box was present and functional.
- The footer confirmed Bing Search is active: "This Copilot feature uses Bing Search".

AI summaries: confirmed active

- Collections coordinator summary: active and on by default.
- Customer page summary: active and on by default.

Final status summary

ITEM	STATUS	NOTES
All 5 Copilot apps in Power Platform	Installed	SCM app updated during this session
Publish Copilots with AI features	Enabled	Tenant-level setting saved
Bing Search support	Enabled	Required for sidecar generative answers
Copilot sidecar (chat pane)	Live	Verified working in F&O
Collections coordinator summary	Active	On by default in this version
Customer page summary	Active	On by default in this version
Immersive Home	Optional, pending	Available in Feature management to enable

Quick reference: where to find Copilot features

FEATURE	LOCATION IN F&O
Copilot sidecar (chat)	Copilot icon in the top right of any F&O page
Collections coordinator summary	Accounts receivable > Collections > Collections coordinator workspace
Customer page summary	Any customer record in Accounts receivable
Immersive Home (if enabled)	Replaces the standard F&O home page

Notes

- Power Platform integration must be enabled in Lifecycle Services before starting this process.

- This process applies to standard commercial cloud environments. Developer environments deployed through Lifecycle Services are not supported.
- Copilot features do not have Feature management toggles in current environment builds; they are controlled through Power Platform app installation.
- The SCM Copilot app update typically takes approximately 20 minutes to complete.
- Cross-region data movement configuration may or may not be needed depending on your Dataverse region. Enabling Bing Search is sufficient for most regions.
