
SUMMARY:

Microsoft Dynamics 365 F&O consultant, MB-310 certified and preparing for MB-500, with hands-on X++ extension development, environment administration through Power Platform Admin Center and LCS, and Azure infrastructure operations. Currently a Python engineer and technical consultant at EBT, building AI document-processing and billing systems integrated with Dynamics 365 Business Central and administering Azure-hosted SQL Server Always On infrastructure. Two years of combined D365, DevOps and Azure experience.

SKILLS:

- D365 F&O Functional: General Ledger, Accounts Payable, Accounts Receivable, Fixed Assets, Credit & Collections, Budgeting.
- D365 F&O Technical (X++): Extensions, Chain of Command, pre/post event handlers, form and table extensions, data entities, set-based database operations (insert_recordset, delete_from, RecordInsertList), Visual Studio dev tools, build and compile.
- D365 Administration & BC Integration: Power Platform Admin Center (PPAC), Lifecycle Services (LCS), Feature Management, Copilot enablement, environment provisioning; Business Central OData/REST APIs with OAuth2 (cloud) and NTLM (on-premises) authentication.
- Azure, Infrastructure & DevOps: Azure VMs (Windows/Linux), SQL Server Always On Availability Groups, Windows Server Failover Clustering, Azure SQL, Storage, Virtual Network, Backup, Active Directory; Azure DevOps, Git, CI/CD, GitHub Actions, Docker; X++, C#, Python, PowerShell, SQL.
- AI & Copilot: Microsoft Copilot for D365 F&O, AI document extraction pipelines (Gemini Flash), Claude API integration, LLM token cost tracking, Claude Code and agentic development tooling, LLM APIs, MCP servers.

WORK EXPERIENCE:**EBT**

Software Engineer & Technical Consultant | March 2026 – Present | Remote

- Built and operate an AI document scanning and digitization service (Python/FastAPI) that ingests documents from SharePoint, extracts structured data using Gemini Flash, and delivers results to Dynamics 365 Business Central and SFTP endpoints for corporate clients; 26,000+ documents processed across 5 products in 2026 (production and UAT), with per-document status and LLM token usage persisted to MySQL for billing.
- Implemented per-client Business Central connectors covering cloud OAuth2 and on-premises NTLM authentication, with per-document status, page and row reporting feeding downstream billing.
- Rebuilt the companion billing and consumption portal (FastAPI, Jinja2, MySQL, Chart.js) with slab-based historical pricing, end-of-month invoice locking, admin/client roles and margin reporting, replacing a defective vendor codebase after documenting 13 defects; integrated the Claude API to power the portal's bot-training module.
- Administer a two-node SQL Server Always On Availability Group on Azure (Windows Server, WSFC): resolved a production Kerberos KRB_AP_ERR_MODIFIED failure traced to an offline Cluster-Aware Updating resource group; designed disk-threshold alerting and CPU-triggered failover.
- Deployed and maintain a retail ERP (POS + WMS) on Ubuntu with PostgreSQL, Redis, Nginx and systemd services.

Runtime Solutions

DevOps Engineer | July 2025 – February 2026

- Designed and implemented Azure cloud infrastructure managing 5+ database environments; migrated workloads from GCP to Azure including Azure Managed SQL and Cosmos DB.
- Automated deployments with GitHub Actions, reducing deployment time by 60% and achieving 99.9% uptime.

Tectura

Trainee, D365 Finance & Operations Consultant | September 2024 – May 2025

- Completed a structured functional and technical training program; earned Microsoft MB-310 (Dynamics 365 Finance Functional Consultant Associate).
- Gained hands-on X++ development experience in an F&O development VM while preparing for MB-500; used Git and Azure DevOps for version control across project branches.

PROJECTS:**D365 F&O Extensions Program (hands-on, 13 modules, PPAC-provisioned environment) & Copilot Rollout**

- Built extensions end to end: table and form extensions, EDTs and enums, form data source and control event handlers, Chain of Command with next-chaining, validateField post-handlers for field-format validation.
- Implemented database manipulation patterns including dual-entry-point classes via Args.parm(), delete_from set-based deletes, RecordInsertList bulk inserts and date-driven line generation.
- Independent engagement: enabled Microsoft Copilot across a commercial cloud F&O environment through Power Platform Admin Center settings and Feature Management, verified the Copilot sidecar live, and authored a reusable rollout runbook.

EDUCATION:

September 2020 – June 2024 | **Jaypee University of Information Technology** | B.Tech, Computer Science & Engineering

- Specialization in Cloud Computing; core team member, ACM Student Chapter.

CERTIFICATION:

Microsoft Certified: Dynamics 365 Finance Functional Consultant Associate (MB-310).
