

SUMMARY:

Software engineer with two years across Python backend development, Azure cloud infrastructure and DevOps automation. Currently building and operating an AI document-processing platform and its billing system at EBT, alongside Azure-hosted Windows/Linux and SQL Server HA infrastructure. Previously automated CI/CD pipelines and cloud migrations at Runtime Solutions. Works daily with AI-assisted and agentic development tooling to ship faster without sacrificing code quality.

SKILLS:

- **Programming & Backend:** Python (FastAPI, Jinja2), Bash, PowerShell, SQL, JavaScript, C#, X++, YAML, JSON; REST APIs, JWT authentication, OAuth2/NTLM integrations, Alembic migrations, Nginx, Node.js/Next.js deployments, PM2, systemd.
- **AI & Agentic Tooling:** LLM-based document extraction pipelines (Gemini Flash), Claude API integration, token usage and cost tracking, Claude Code, GitHub Copilot, Microsoft Copilot, LLM APIs, MCP servers, spec-driven agentic development.
- **Cloud & DevOps:** Microsoft Azure (VMs, Virtual Network, Load Balancers, Storage, Azure SQL, Backup, VPN Gateway, Active Directory, ARM Templates, App Services), AWS (EC2, S3); GitHub Actions, Azure DevOps, Docker, Kubernetes, Terraform, Jenkins, Git, Infrastructure as Code.
- **Databases:** MySQL, PostgreSQL, SQL Server (Always On Availability Groups, WSFC), MongoDB, Azure Cosmos DB, Redis.
- **Monitoring & Ops:** Grafana, Prometheus, Zabbix, Linux administration, HA/DR architecture, Certbot/TLS, Kerberos troubleshooting.

WORK EXPERIENCE:

EBT

Software Engineer (Python) & Technical Consultant | March 2026 – Present | Remote

- Built and operate an AI document scanning and digitization platform (Python/FastAPI) that ingests documents from SharePoint, extracts structured data with Gemini Flash and delivers results to Dynamics 365 Business Central and SFTP for multiple corporate clients; 26,000+ documents processed across 5 products in 2026 (production and UAT).
- Implemented per-client Business Central connectors (cloud OAuth2, on-premises NTLM) and per-document reporting of status, pages, rows and LLM token usage to MySQL, feeding downstream billing.
- Rebuilt the billing and consumption portal from scratch (FastAPI, Jinja2, MySQL, Chart.js, JWT via HttpOnly cookies) after auditing a vendor codebase and documenting 13 defects including SQL injection and unwired middleware; integrated the Claude API to power the portal's bot-training module.
- Designed slab-based pricing with historical slab-date billing, end-of-month invoice locking, admin/client role separation, margin reporting and CSV export; built with Claude Code from a structured, phased specification.
- Deployed a full-stack retail ERP (POS + WMS) on an Ubuntu 22.04 VPS with PostgreSQL, Redis, Nginx, Node.js 20, Python 3.12, Alembic and systemd; resolved outbound port restrictions (SSH over 443), build failures and service binding issues; TLS via Certbot.
- Administer a two-node SQL Server Always On cluster on Azure (Windows Server, WSFC): fixed a production Kerberos KRB_AP_ERR_MODIFIED failure traced to an offline CAU resource group; designed disk-threshold alerting and CPU-triggered failover.

Runtime Solutions

DevOps Engineer | July 2025 – February 2026

- Designed and implemented Azure cloud infrastructure managing 5+ database environments (MySQL, MongoDB); automated deployment pipelines with GitHub Actions, reducing deployment time by 60% and achieving 99.9% uptime.
- Configured Node.js/Next.js servers with PM2 autostart and restart procedures, cutting downtime by 80%; authored technical documentation for knowledge transfer and maintenance.

Earlier Experience

- Tectura, Trainee D365 Finance & Operations Consultant (September 2024 – May 2025): completed the training program, earned Microsoft MB-310 and gained hands-on X++ development experience.
- EasyGov, Web Developer Intern (June – August 2023): application maintenance and legacy website improvements in the Product Deployment & Delivery team.

PROJECTS:

AI Document Scanning Platform & Billing Dashboard (EBT)

- Python/FastAPI bot service: SharePoint ingestion, Gemini Flash extraction, per-client Business Central and SFTP delivery, MySQL persistence of results and LLM token usage; deployed on Ubuntu VMs with per-client isolation.
- FastAPI, Jinja2 and Chart.js portal over MySQL: slab-based historical pricing, invoice locking, admin/client portals, reports, CSV export and a Claude API bot-training module; built via a spec-driven, phased workflow with Claude Code.

AgentFn Cloud Migration & LMS Deployment (Runtime Solutions)

- Migrated infrastructure from GCP to Azure (SQL to Azure Managed SQL, MongoDB to Cosmos DB); configured CI/CD pipelines and new Azure servers and storage architecture.
- GitHub Actions deploy.yml pipeline from private repositories with PM2 autostart for Node.js/Next.js frontend and backend, ensuring continuous availability.

EDUCATION:

September 2020 – June 2024 | Jaypee University of Information Technology | B.Tech, Computer Science & Engineering
Specialization in Cloud Computing; core team member, ACM Student Chapter. Microsoft Certified: Dynamics 365 Finance Functional Consultant Associate (MB-310); preparing for MB-500.
